***Pellham Phillips Architects Engineers
Celebrates Milestone 30th Anniversary***

May 14, 2007(Springfield, MO)... Larry Phillips, principal of Pellham Phillips Architects & Engineers announced today the 30th Anniversary of the firm. Founded in 1977, Pellham Phillips has adapted to a change in firm partnership, changes in technology, changing market conditions, as well as a fluctuating economy to survive and prosper.

Asked about the biggest challenge over the 30 years, Phillips replied, "In our industry, keeping good talent is the most important factor in the success of any firm. We have a blend of experienced professionals along with some terrific young talent. I believe right now, I have the best overall staff I've had in our 30 years. I am very proud of these folks and I'd put them up against anyone."

Pellham Phillips, with 23 employees, is a full service firm with in-house architects, engineers, and interior designers. Phillips said, "Since 40% of any building design project is engineering, it only makes sense to have those architects and engineers working side by side throughout the entire design process. This saves the client both time and money."

Pellham Phillips is the architect for many of Springfield's and the regions landmarks. Included among those is Hammons Field, Chateau on the Lake, the main campus of Ozarks Technical Community College, James River Assembly of God, Second Baptist Church, and Hammons Hall for the Performing Arts. When asked about the impressive list, Phillips stated, "In business, sometimes you have to be lucky and get a few breaks, but as the old saying goes, 'The harder I work, the luckier I get!' We've been blessed with some really great clients and have had some wonderful opportunities."
